EUROPEAN & INTERNATIONAL **NETWORK** FOR A JUST BUILDING TRANSITION

hosted by
FRUGALITÉ
HEUREUSE
& CRÉATIVE

The European Network for a Just Building Transition is a growing transnational network connecting initiatives, movements and actors across Europe who are working towards a socially just and climate-responsible transformation of the built environment. Rather than creating a new organisation, the network aims to strengthen existing initiatives by building relationships, creating spaces for exchange and supporting collective learning and action across borders. It brings together people working on interconnected struggles around housing, climate justice, demolition, reuse, resource-intensive construction practices, ownership structures and democratic urban development.

So far, the network has developed through European Assemblies, working groups, regular online meetings and shared moments of action, including the first European Action Week 2026. It remains an open and evolving process.

The network is open to people, groups and organisations who want to stay informed, get involved in upcoming activities, join working groups, share skills or connect with others working towards a just building transition.

FOR A JUST BUILDING TRANSITION

From Assembly to Action: A Just Transition for Our Built Environment

We need change!

The building sector has a huge impact on our climate and biodiversity - it is responsible for about 50% of all extracted material, as well as for over 35% of EU waste.^① Buildings, over their life cycle, account for around 40% CO₂ emissions in the EU.^② To maintain a liveable world for people and other species and to avoid the most catastrophic consequences of climate change, we must drastically reduce our emissions and resource use. To do that democratically, we need to rethink the system we are acting within, reconsider our needs, and challenge dominant industry narratives. The science is clear that business as usual is no longer an option: there might be a way out, but it requires deep, systemic change, not small, cosmetic reforms.

Social justice over speculation

Climate justice and social justice are inseparable: a “green transition” that pushes people out of their homes or increases inequality is unjust, and social policies that fuel ecological breakdown are unacceptable. Our built environment must serve the public good. That means prioritising planetary boundaries and social needs.

This requires confronting the financialisation of the built environment. Buildings that support human needs and rights have no place in speculative investment logics, but have to prioritise public, cooperative and non-profit provision. We are in urgent need of transparency about who owns, benefits, and decides.

Reuse over demolition

Reducing new construction means questioning demand before expanding supply. It means prioritising care, repair, reuse and adaptation, and valuing long-term habitability over demolition and speculation. There is no shortage of space; vacant and underused buildings must be redistributed and adapted, not left empty for profit or bureaucratic reasons. New construction should be the exception. When it happens, it must serve clear social purposes, strengthen communities and remain within planetary boundaries.

Biodiversity over Extraction

Because a deeply enmeshed culture of extraction dominates the built environment, we must acknowledge that the construction industry is addicted to products and materials that are made with energy-intensive methods, causing large-scale devastation of natural habitats. We call for regenerative practices that prioritise biodiversity above profit margins, and reject the greenwashing that is rampant across our industry.

Who we are

We are European citizens, as well as built environment professionals, united by a shared vision of safe, affordable, healthy and resilient spaces. We believe that architecture is a public act with ethical consequences and acknowledge our responsibility to act within the planetary boundaries.

As an “**Assembly for a Just Building Transition**”, we use our diversity and differences to recognise strong points of convergence and a shared responsibility to act now. By working across contexts, we are building a collective European process that remains open, iterative and representative.

Join us!

The Movement for Frugality is part of the European Network for a Just Building Transition

De l'assemblée à l'action : une transition juste pour notre environnement bâti

Nous avons besoin de changement !

Le secteur du bâtiment a un impact énorme sur notre climat et notre biodiversité : il est responsable d'environ 50 % de tous les matériaux extraits, ainsi que de plus de 35 % des déchets de l'UE^①. Les bâtiments, tout au long de leur cycle de vie, représentent environ 40 émissions de CO2 dans l'UE^②. Pour maintenir un monde viable pour les hommes et les autres espèces et éviter les conséquences les plus catastrophiques du changement climatique, nous devons réduire drastiquement nos émissions et notre utilisation des ressources. Pour y parvenir démocratiquement, nous devons repenser le système dans lequel nous agissons, reconsidérer nos besoins et remettre en question les récits dominants de l'industrie. La science est claire sur le fait que le statu quo n'est plus une option : il y a peut-être une issue, mais cela nécessite un changement profond et systémique, pas de petites réformes cosmétiques.

Justice sociale plutôt que spéculation

La justice climatique et la justice sociale sont inséparables : une « transition verte » qui pousse les gens hors de chez eux ou augmente les inégalités est injuste, et les politiques sociales qui alimentent la dégradation écologique sont inacceptables. Notre environnement bâti doit servir le bien public, ce qui signifie donner la priorité aux limites planétaires et aux besoins sociaux. Cela nécessite de faire face à la financiarisation de l'environnement bâti. Les bâtiments qui répondent aux besoins et aux droits de l'homme ne peuvent s'inscrire dans des logiques d'investissement spéculatif, mais doivent privilégier la commande publique, coopérative et à but non lucratif. Nous avons un besoin urgent de transparence quant à qui possède, qui bénéficie et qui décide.

Réutilisation plutôt que démolition

Réduire les nouvelles constructions signifie remettre en question la demande avant d'augmenter l'offre. Cela signifie donner la priorité à l'entretien, à la réparation, à la réutilisation et à l'adaptation, et valoriser l'habitabilité à long terme plutôt que la démolition et la spéculation. Il n'y a pas de pénurie d'espace ; les bâtiments vacants et sous-utilisés doivent être redistribués et adaptés, et non laissés vides pour des raisons lucratives ou bureaucratiques. Les nouvelles constructions devraient être l'exception. Et elles doivent alors servir des objectifs sociaux clairs, renforcer les communautés et rester dans les limites planétaires.

Biodiversité plutôt qu'extractivisme

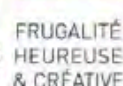

Parce qu'une culture d'extraction profondément ancrée domine l'environnement bâti, nous devons reconnaître que l'industrie de la construction est dépendante des produits et matériaux fabriqués avec des méthodes énergivores, provoquant une dévastation à grande échelle des habitats naturels. Nous appelons à des pratiques régénératives qui privilégient la biodiversité sur les marges bénéficiaires, et rejetons le green-washing qui sévit dans notre industrie.

Qui sommes-nous Nous sommes des citoyens européens, ainsi que des professionnels de l'environnement bâti, unis par une vision commune d'espaces sûrs, abordables, sains et résilients. Nous considérons que l'architecture est un acte public aux conséquences éthiques et nous reconnaissons notre responsabilité à agir dans les limites planétaires. En tant qu'« Assemblée pour une transition juste », nous valorisons notre diversité et nos différences pour mettre en avant une convergence puissante et une responsabilité partagée d'agir maintenant. En travaillant dans plusieurs contextes, nous construisons un processus européen collectif qui reste ouvert, itératif et représentatif.

Rejoignez-nous!

Le Mouvement de la Frugalité est membre du réseau européen pour une Transition Juste du secteur du bâtiment

COMMON POLITICAL STATEMENT, may 2026

From Assembly to Action: A Just Transition for Our Built Environment

We need change!

The building sector has a huge impact on our climate and biodiversity - it is responsible for about 50% of all extracted material, as well as for over 35% of EU waste.^[1] Buildings, over their life cycle, account for around 40% CO₂ emissions in the EU.^[2] To maintain a liveable world for people and other species and to avoid the most catastrophic consequences of climate change, we must drastically reduce our emissions and resource use. To do that democratically, we need to rethink the system we are acting within, reconsider our needs, and challenge dominant industry narratives. The science is clear that business as usual is no longer an option: there might be a way out, but it requires deep, systemic change, not small, cosmetic reforms.

Social justice over speculation

Climate justice and social justice are inseparable: a “green transition” that pushes people out of their homes or increases inequality is unjust, and social policies that fuel ecological breakdown are unacceptable. Our built environment must serve the public good. That means prioritising planetary boundaries and social needs.

This requires confronting the financialisation of the built environment. Buildings that support human needs and rights have no place in speculative investment logics, but have to prioritise public, cooperative and non-profit provision. We are in urgent need of transparency about who owns, benefits, and decides.

Reuse over demolition

Reducing new construction means questioning demand before expanding supply. It means prioritising care, repair, reuse and adaptation, and valuing long-term habitability over demolition and speculation. There is no shortage of space; vacant and underused buildings must be redistributed and adapted, not left empty for profit or bureaucratic reasons. New construction should be the exception. When it happens, it must serve clear social purposes, strengthen communities and remain within planetary boundaries.

Biodiversity over Extraction

Because a deeply enmeshed culture of extraction dominates the built environment, we must acknowledge that the construction industry is addicted to products and materials that are made with energy-intensive methods, causing large-scale devastation of natural habitats. We call for regenerative practices that prioritise biodiversity above profit margins, and reject the greenwashing that is rampant across our industry.

Who we are

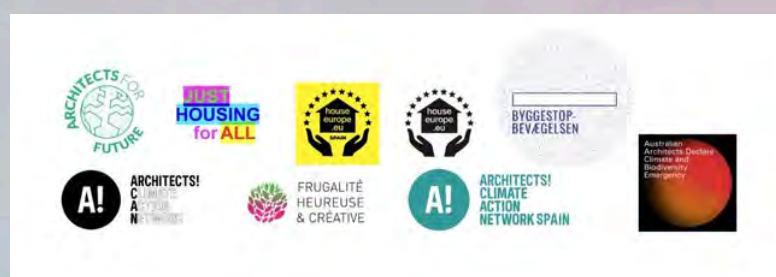

We are European citizens, as well as built environment professionals, united by a shared vision of safe, affordable, healthy and resilient spaces. We believe that architecture is a public act with ethical consequences and acknowledge our responsibility to act within the planetary boundaries.

As an “Assembly for a Just Building Transition”, we use our diversity and differences to recognise strong points of convergence and a shared responsibility to act now. By working across contexts, we are building a collective European process that remains open, iterative and representative.

DENMARK

Byggestop

Byggestopbevægelsen (The Construction Halt Movement) est un mouvement associatif danois qui milite pour l'introduction d'un arrêt national temporaire des nouvelles constructions afin de respecter les limites planétaires et climatiques.

Ce collectif regroupe des professionnels du secteur du bâtiment (architectes, ingénieurs), des citoyens et des activistes écologiques.  Les trois grandes revendications

Le mouvement articule ses actions autour de trois piliers principaux : • Moins de constructions neuves, plus de redistribution du parc immobilier existant. • Moins de démolitions, plus de rénovations et de réhabilitations. • Moins de spéculation financière, plus de justice sociale pour garantir des logements abordables pour tous.

L'idée d'un moratoire sur les nouvelles constructions (ou Building Stop) dépasse les frontières du Danemark. Des initiatives et événements similaires sont portés à l'échelle internationale, notamment par des organisations et des universités comme l'Architectural Association à Londres ou à travers des réflexions menées par des chercheuses comme Charlotte Malterre-Barthes sur un moratoire mondial de la construction.

DENMARK

Byggestop

Byggestopbevægelsen (The Construction Halt Movement) is a Danish association that campaigns for the introduction of a temporary national stop on new constructions in order to respect planetary and climatic limits.

We are a new movement that will bring the Danish construction industry into balance with planetary boundaries and create good, affordable housing for all by introducing a temporary, national construction stop.

In the Construction Halt Movement, we work to implement three concrete demands:

Less new construction, more redistribution

Less demolition, more renovation

Less speculation, more social justice

The Building Halt Movement is a movement of professionals in the building industry: architects, engineers, citizens and climate activists who work together for a responsible future.

Frugalité Heureuse & Créative

Le Mouvement pour une Frugalité heureuse et créative s'est construit autour du Manifeste du même nom, lancé le 18 janvier 2018. Reconnaisant « la lourde part des bâtisseurs » dans les désastres en cours, il appelle à **développer des établissements humains frugaux en énergie, en matière et en technicité, créatifs et heureux pour la terre et pour l'ensemble de ses habitants, humains et non humains.**

4 engagements pour l'architecture frugale et le ménagement des territoires :

(S')ENGAGER | ne plus administrer
CONTENTER | ne plus consommer
RÉHABILITER | ne plus construire
MÉNAGER | ne plus aménager
Mieux, avec moins.

“Frugalité” vient du latin “fruit”.
Apulée définit la frugalité comme “le juste parage des récoltes de la terre.”

Frugalité Heureuse & Créative

The Movement for a happy and creative frugality (in architecture and land-caring) was built around the Manifesto of the same name, launched on 18 January 2018. Recognizing "the heavy share of builders" in ongoing disasters, it calls for developing human settlements that are frugal in energy, material and technology, creative and happy for the earth and for all its inhabitants, human and non-human.

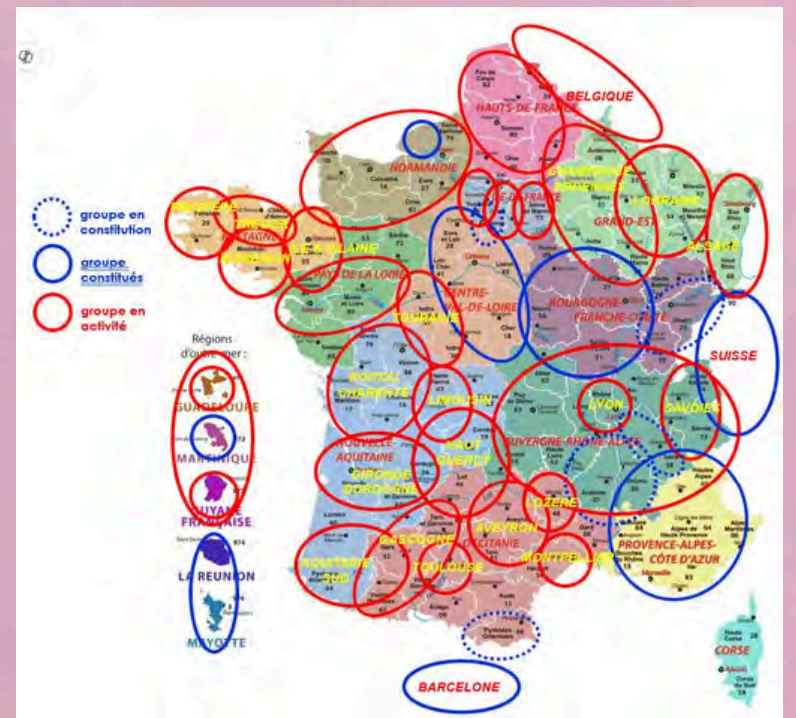

4 commitments

for frugal architecture and land care:

- **Getting involved** rather than managing
- **Contenting** rather than consuming
- **Rehabilitating** rather than building new
- **Land-caring** rather than land-development

Better, with less

"Frugalité" comes from the latin "fruit".
Apulée defines it as "the fair harvest of the fruits of the earth."

FOR A JUST BUILDING TRANSITION

**To build
or not
to build ?**

That is the question that one should ask himself if he or she is an architect, an urban planner, an engineer, a designer, a builder of any kind in the western world. Demographic transition is completed ; millions of dwellings and other buildings are sitting empty, and slowly deteriorating ; resources are getting scarce ; the Earth is being damaged every day by human actions. As architects, and as members of the building community, we share a big responsibility in how the face of the Earth has changed for the worse. As builders, we owe to the communities to allow ourselves to ask this counter-intuitive, somewhat surprising question : to build or not to build ?

To answer this question, we propose a new path that can be summed up into one word : **Frugality**.

Frugality is creative. To use frugality as an *ethos* comes from the lessons given to us by nature, forgotten by contemporary Modernism that is laden with productivism and consumerism. From masters of nature, we have become her prodigal children. Let us return to the source of our genius, this free expression of nature within us, which is the source of our arts. Let us be inspired by arts and culture, and by the specificity of local resources, the spring of original landscapes and builtscapes. **Form ever follows frugality.**

Frugality is a form of ecology. This economy is a form of ecology. In ancient Greek, *oikos logos* refers to the order of the *house*, that we build together, one and multiple at the same time, that of the human settlement and of its close expression : the commune. It is this *common house* that we are trying to rebuild on the damaged planet we are dwelling. Frugality is also a *commune* at the heart of which we live ; where we are anxious to live together full of pre-existences in any order, inspired by diverse modes of existence and several regimes of space and time.

Frugal comes from frux-frugis, fruges, meaning the fruit in Latin. According to the Roman philosopher Apuleius, frugality can be defined as "the just harvest of the fruits of the earth". When it is measured, beneficial for the earth and harmless, frugality is good for the human beings who carry it out, justly satiated. Frugality is an ethical ambition for designers of human settlements where the resource is an essential part of the community structure. Frugality is however fruitful and feeds on richness in several ways through :

- the abundance of feasible solutions to respond to each project, including how to act and think with nature, even by acting outside the law to advance the law ;
- the reamplified diffusion of architectures adapted to different environments, societies, cultures and climates, for all community members, and especially for those who are most vulnerable ;
- the ample variety of material and building processes that allow us to put aside sad modernist habits thanks to adapted and proportionate solutions.

Frugality emerges from the ground; it does not descend from a so-called divine or technocratic superiority. It rises from the *genius loci*, meaning "spirit of the place" where nature's work and the spirit of the humanity join. It unfolds in environments, spurs our meeting with what is other and thus generating new space for agreement and the creative synthesis. To date, modernist dispersions and isolations have brought on major segregations amongst people. The seemingly unlimited multiplication of material goods has not successfully filled this loss of the art of living with exchange and common goods. Happy and creative frugality is associated with sharing. Sharing the Earth is our responsibility in the current ecological and climate emergency. Living and creating with frugality, that is in an economy of measure and balance, is necessary for life itself. **We can do better with less.**

Movement for a Happy Frugality

* This movement started in January 2018 with the publication of a Manifesto for Happy Frugality written by Alain Bornarel, Dominique Gauzin-Müller, and Philippe Madec. Since then, 14 000 people from 85 countries have signed it and 40 local groups have formed to share and act according to the manifesto. To read and sign the manifesto (available in several languages), go to : www.frugalite.org

A4F Architect For Future

Born in Germany and active through more than 40 local groups in Germany and Austria, Architects4Future is an open movement which brings together members, activists and supporters who are connected to the construction sector. Not only architects, but also planners, engineers, researchers, students, craftspeople and many others working towards a socio-ecological transformation of the built environment.

In solidarity with the Fridays for Future movement, Architects4Future is committed to the 1.5°C target and advocates for a fundamental change in how we plan, build, renovate, use and care for buildings and spaces. Most of the work is carried out voluntarily by people across local groups, working groups and project teams.

Architects4Future engages with the construction sector, politics and wider society. Its work is guided by ten core demands, including reconsidering needs, questioning demolition critically, accelerating the energy transition, building in circular and climate-positive ways, strengthening climate resilience, preserving biodiversity, assuming social responsibility and planning integratively.

Lehmbaukontor e. V. -

The non-profit association Lehmbaukontor e. V. Berlin/Brandenburg has been a driving force for ecological construction with a particular focus on earth construction since its foundation in 1991. The association's aim is to promote the diverse applications of earth as a building material as well as its cultural and ecological significance while strengthening regional development in the field of natural construction. With around 45 members most of whom work in the construction sector the association forms an open network of professionals, initiatives and supporters. LehmbauKontor sees itself not as a construction company, but as a platform for exchange and networking supporting the development of new businesses and projects in the field of earth construction. The association is also a member of Dachverband Lehm e. V.

During the European Action Week by architectsforfuture, we enjoyed our four day workshop at the Denk-mal-Hof in Niederfinow (Brandenburg, Germany).

Verbund offener Werkstätten

L'Association des ateliers ouverts (Verbund Offener Werkstätten e.V.) est l'organisation faîtière et le réseau des ateliers ouverts en Allemagne. **Fondée en 2012** par des membres de la communauté, elle regroupe actuellement **plus de 500 ateliers membres**.

Les ateliers ouverts sont des **espaces dédiés à l'artisanat, aux procédés de fabrication assistés par ordinateur et aux technologies numériques**, que chacun peut contribuer à façonner et à utiliser. Leur principe fondamental est **le partage des connaissances, des outils et des machines, des technologies, des matériaux et de l'espace**. Ces ateliers sont accessibles à tous ceux qui souhaitent s'impliquer activement dans des projets artisanaux ou artistiques : jeunes et moins jeunes, amateurs et (semi-)professionnels, artistes, passionnés, créateurs et bricoleurs.

INTERNATIONAL

The Architect's Climate Action Network (ACAN) is a voluntary network of individuals within the built environment industry taking action to address the twin crises of climate and ecological breakdown. It started in 2019 in the UK, with chapters around the world starting soon after. ACAN exists to address the way our built environment is made, operated and renewed in response to the climate emergency. As a network of individuals, we channel personal energy, expertise and action towards a common goal - the systemic change of our profession and the construction industry as a whole. We see this as a matter of urgency. Through collective action, our mission is to mobilise a movement of professional activists towards this goal by building an open, supportive and inclusive organisation. All ACAN chapters operate on three central aims, which form the basis of our campaigns and efforts:

- **Decarbonise Now**
- **Ecological Regeneration**
- **Cultural Transformation**

Architects! Climate Action Network

AACAN is a network of individuals within architecture and related built environment professionals taking action to address the twin crises of climate and ecological breakdown.

How?

By creating a network of engaged and active people we aim to create change through:

- **POLITICAL CAMPAIGNING & LOBBYING**
- **MEANINGFUL ACTION & PUBLIC ENGAGEMENT**
- **RESEARCH & KNOWLEDGE SHARING**

We welcome anyone that shares in this vision for change.

“You can’t underestimate the power of bringing people together.”

House Europe : Right to Housing ! Now and Forever

Europe does not lack buildings. It lacks affordable housing.

The current housing market is putting profit over people and the planet. But it doesn't have to be this way. That is why our initiative calls for activating the existing building stock as a resource. Today it is empty, broken and expensive.

Tomorrow's homes are already built – at yesterday's prices.

www.right-to-housing.eu

Sign, share and support now!

Right to housing! Now and forever – European Citizens' Initiative ECI to bring the issue to the European political agenda and ask the European Commission to act

Petition: If 1 million people across the EU sign the initiative – ideally more –, the European Commission is required to review it and respond. The collection of signatures will begin in September 2026.

House Europe : Right to Housing ! Now and Forever

**L'Europe ne manque pas de bâtiments.
Elle manque de logements abordables.**

Le marché immobilier actuel met profit sur les personnes et la planète. Mais il n'est pas nécessaire que ce soit ainsi.

C'est pourquoi notre initiative appelle à l'activation du parc immobilier existant comme une ressource. Aujourd'hui, il est vacant, dégradé et cher.

Les maisons de demain sont déjà construites – aux prix d'hier.

www.right-to-housing.eu

Signez, partagez et soutenez maintenant !

Droit au logement ! Maintenant et pour toujours – Initiative Citoyenne Européenne ICE Porter le sujet à l'agenda politique européen et demander à la Commission européenne d'agir

Petition : Si 1 million de personnes dans toute l'UE signent l'initiative – idéalement davantage –, la Commission européenne est tenue de l'examiner et d'y répondre. La collecte de signatures débutera en septembre 2026.

ESBA / ISBA EUROPEAN / INTERNATIONAL STRAW BUILDING ASSOCIATION

ESBA was founded to **cooperate, exchange and communicate** in the topic of straw building in Europe.

Cooperation means, that we – the European straw bale networks – want to work together better, whether in European projects, on bigger straw bale projects or on an informal base.

Exchange means, that we want to share the results of researches and tests, building techniques and skills to avoid double work, to cooperate on international base and to build more professional energy-saving, healthy and sustainable houses.

Communication means, that we want to share the results of our work, efforts and experiences on a free open-source level or in (paid) workshops to support and help self-builders, professionals, officials, architects in building houses made of straw.

ESBA / ISBA EUROPEAN / INTERNATIONAL STRAW BUILDING ASSOCIATION

L'ESBA a été fondée pour favoriser la coopération, les échanges et la communication autour de la construction en paille en Europe.

Coopération signifie que nous, le réseau européen de la construction en bottes de paille, souhaitons renforcer notre collaboration, que ce soit dans le cadre de projets européens, de projets de construction en paille d'envergure ou de manière plus informelle.

Échanges signifie que nous souhaitons partager les résultats de nos recherches et essais, nos techniques constructives et nos savoir-faire, afin d'éviter les doublons, de favoriser la coopération à l'échelle internationale et de construire des bâtiments toujours plus professionnels, économes en énergie, sains et durables.

Communication signifie que nous souhaitons partager les résultats de nos travaux, nos efforts et nos retours d'expérience, en accès libre et selon les principes de l'open source, ou dans le cadre de formations et d'ateliers payants. Notre objectif est d'accompagner et de soutenir les autoconstructeurs, les professionnels, les acteurs institutionnels et les architectes dans leurs projets de construction en paille.

CAN

Climate Action Network (CAN) Europe is Europe's leading NGO coalition fighting the climate crisis. We are a unique network, in which environmental and development organisations work together to issue joint advocacy campaigns and maximise their impact. **With over 200 member organisations active in 40 European countries, representing over 1,700 NGOs and more than 40 million citizens, CAN Europe promotes sustainable climate, energy and development policies throughout Europe.**

Build Better Lives campaign is a pan-European initiative led by Climate Action Network (CAN) Europe and over 90 civil society organizations uniting social, housing, climate, and youth movements. En France l'initiative est portée par le réseau CLER (300 structures de professionnels, engagées dans la mise en œuvre d'une transition énergétique juste et ambitieuse.)

Frugalité Québec

Inspiré du mouvement né en France, Frugalité heureuse et créative – Québec, rassemble des citoyens et des professionnels autour d'une ambition commune : faire mieux avec moins, valoriser l'existant et repenser nos façons de construire, d'habiter et de transformer les territoires.

Notre collectif souhaite faire vivre les principes de la frugalité dans le contexte québécois, en tenant compte de la diversité de nos territoires et de nos réalités climatiques, sociales et culturelles. Nous privilégions une approche humaine, participative et ouverte, fondée sur le partage des connaissances, la coopération et l'intelligence collective.

Avec plus de 200 signataires au Québec, le mouvement témoigne d'un intérêt grandissant pour des pratiques plus sobres, solidaires et respectueuses des ressources.

Le collectif développe progressivement ses activités à travers des rencontres, des ateliers participatifs, des conférences et des collaborations.

Québec

Frugalité Québec

Inspired by the movement born in France, Happy and Creative Frugality – Québec brings together citizens and professionals around a common ambition: to do better with less, to value what already exists and to rethink our ways of building, living and transforming territories.

Our collective wishes to bring the principles of frugality to life in the Quebec context, taking into account the diversity of our territories and our climatic, social and cultural realities. We favor a human, participatory and open approach, based on knowledge sharing, cooperation and collective intelligence.

With more than 200 signatories in Quebec, the movement shows a growing interest for more sober practices, solidarity and respectful of resources.

The collective gradually develops its activities through meetings, participatory workshops, conferences and collaborations.
